

A woman with short dark hair, wearing a floral patterned top, holds a baby wrapped in a white cloth. She is holding a book with a red cover. The background is a blurred outdoor setting with a window.

HEPATITIS.

TIME TO TEST. TIME TO TREAT. TIME TO CURE.

© WHO/Zakwathu Communications Malawi

HEPATITIS ATTACKS THE MOST VULNERABLE

Over 90% of new hepatitis B infections occur through mother-to-child transmission and during early childhood. But other groups are also at higher risk of both hepatitis B and C, including people who inject drugs; men who have sex with men; people who have had tattoos or acupuncture; partners of people living with hepatitis B; and health care workers.
