

VACCINATION

IMMUNIZATION
IS ESSENTIAL

DURING THE PANDEMIC

10 TIPS FOR PARENTS

- 1.** Vaccinating your newborn and family members with routine immunizations is safe during the COVID-19 pandemic.
- 2.** Make sure your child is up to date with their routine vaccines: check their vaccination card or contact their healthcare provider and ask if there are any missed doses.
- 3.** If your child has missed any vaccines, ask their healthcare provider how to make them up.
- 4.** Only one person should accompany your child to the health center for their vaccines. Protect yourself and others by using a mask.
- 5.** If you or your child doesn't feel well before going to get vaccinated, inform the health center before going. The staff will decide if you should reschedule your visit.
- 6.** If you or your child has tested positive for COVID-19, wait to get vaccinated. Your healthcare provider will tell you when to come back.
- 7.** Getting vaccinated will not weaken your or your child's immune system.
- 8.** The health center has taken precautions to keep you safe and is waiting for you and your family.
- 9.** Your family has the right to the life-saving protection offered by vaccines.
- 10.** The COVID-19 pandemic reminds us how valuable vaccines are. Take advantage of those we have to protect our children.
