

Maintain good hygiene, biosafety and vaccination practices.

1

Make an accurate diagnosis of infectious diseases in animals through clinical, epidemiological and laboratory tests

2

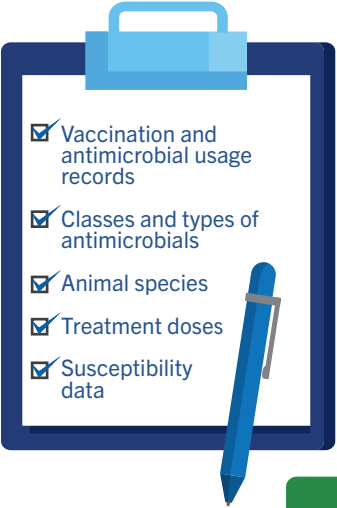

Prescribe and use antimicrobials only if necessary

THE ROLE OF VETERINARIANS IN THE FIGHT AGAINST ANTIMICROBIAL RESISTANCE

5

Keep vaccination and antimicrobial use records within the farm

- ✓ Vaccination and antimicrobial usage records
- ✓ Classes and types of antimicrobials
- ✓ Animal species
- ✓ Treatment doses
- ✓ Susceptibility data

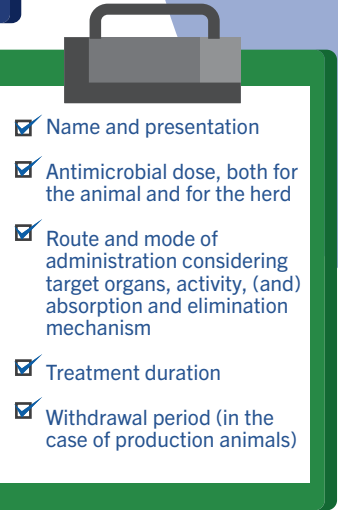

4

All antimicrobial prescriptions should include:

3

We count on you to preserve the efficacy of antimicrobials, by using them in a responsible and sensible way

- ✓ Name and presentation
- ✓ Antimicrobial dose, both for the animal and for the herd
- ✓ Route and mode of administration considering target organs, activity, (and) absorption and elimination mechanism
- ✓ Treatment duration
- ✓ Withdrawal period (in the case of production animals)
