### FIRST AUTOCHTHONOUS VECTOR-BORNE CASES

In epidemiological week (EW) 3 of 2016, the France International Health Regulations (IHR) National Focal Point (NFP) notified PAHO/WHO of the detection of the first autochthonous vector-borne cases of Zika virus in Saint Martin.

### GEOGRAPHIC DISTRIBUTION

No information is available on the geographic distribution of cases.

### TREND

Since EW 52 of 2016, weekly numbers of suspected cases have decreased and remain very low, with a total of 130 suspected cases being reported (**Figure 1**).<sup>1</sup> In the last 8 weeks (EW 23 to EW

<sup>1</sup> Weekly numbers of dengue, chikungunya, and Zika cases are estimates. According to Santé Publique France, the estimated number of suspected cases is the sum of the number of visits recorded by the Decentralized Centers of Prevention and Care (CDPS) and the estimated number of people who consulted a general practitioner for this purpose. The estimate is based on data collected by the sentinel physician network. Cire Antilles Guyane. Arboviruses – Situation of dengue, chikungunya, and Zika in the Antilles. EW 30 of 2017. Available at: [http://invs.santepubliquefrance.fr/fr/content/download/138997/501556/version/148/file/pe\\_arbo\\_antilles\\_040817.pdf](http://invs.santepubliquefrance.fr/fr/content/download/138997/501556/version/148/file/pe_arbo_antilles_040817.pdf)

30 of 2017), no suspected or confirmed cases have been reported. The last confirmed case of Zika was reported in xx

## CIRCULATION OF OTHER ARBOVIRUSES

Between July 2016 and July 2017, the number of suspected dengue cases has remained below the epidemic threshold level, with an average of five cases per week.<sup>1</sup> In the last 8 weeks (EW 23 to EW 30 of 2017), approximately 70 suspected cases have been reported.

Between July 2016 and July 2017, a total of 25 suspected chikungunya cases have been reported.<sup>1</sup> In the last 8 weeks (EW 23 to EW 30 of 2017), no suspected cases have been reported.

## ZIKA VIRUS DISEASE IN PREGNANT WOMEN

As of EW 30 of 2017, a total of 48 pregnant women with confirmed Zika virus infection have been reported by Saint Martin health authorities.<sup>1</sup> Most of these women have completed their pregnancy.<sup>2</sup>

## ZIKA COMPLICATIONS

### ZIKA-VIRUS-ASSOCIATED GUILLAIN-BARRÉ SYNDROME (GBS)

As of EW 5 of 2017, two cases of neurological syndrome, including a suspected GBS case, were detected among laboratory-confirmed cases of Zika virus by Saint Martin health authorities.<sup>2</sup>

### CONGENITAL SYNDROME ASSOCIATED WITH ZIKA VIRUS INFECTION

As of EW 30 of 2017, a case of cerebral malformation in a fetus of a woman confirmed for Zika virus infection was reported by Saint Martin health authorities.<sup>1</sup>

### DEATHS AMONG ZIKA CASES

As of EW 30 of 2017, no deaths among Zika cases have been reported by Saint Martin health authorities.<sup>1</sup>

## NATIONAL ZIKA SURVEILLANCE GUIDELINES

The Cire Antilles Guyane has implemented a "surveillance program, alert and management of epidemics" with an integrated preparedness and response plan for vector-borne diseases. More information is available at:

<http://www.invs.sante.fr/Dossiers-thematiques/Maladies-infectieuses/Maladies-a-transmission-vectorielle/Zika/Le-systeme-de-surveillance>

## INFORMATION-SHARING

The Cire Antilles Guyane publishes a periodic epidemiological bulletin on Zika virus. At the time of this report, the latest Regional Health Agency epidemiological bulletin available was from EW 30 of 2017.
