<b>Total</b>	<b>743,607</b>	<b>16</b>	<b>33,028</b>	<b>4,691</b>	<b>68,974</b>	<b>5%</b>		

\* Recovered counts as indicated by reporting Member States

† Data reported by state/district/territory public health authorities. Excludes counts for Guam, Commonwealth of the Northern Marianas, Puerto Rico, and the United States Virgin Islands

‡ To date, the probable deaths are those reported and defined by New York City, available at <https://on.nyc.gov/2RloJdU>

§ Total confirmed cases reported as per Peru Ministry of Health, of which 6,820 cases tested positive by RT-PCR and the remaining 4,655 cases tested positive by rapid diagnostic tests (RDTs); however, to date, these RDTs are not recommended for use by WHO

**Note:** WHO recommends using the following categories to describe **transmission patterns** at national and sub-national levels (wherever possible) to guide decisions for preparedness, readiness and response activities.

Category number	Category name	Definition
1	No cases	Countries/territories/areas with no cases
2	Sporadic cases	Countries/territories/areas with one or more cases, imported or locally detected
3	Clusters of cases	Countries/territories/areas experiencing cases, clustered in time, geographic location and/or by common exposures
4	Community transmission	Countries/area/territories experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: - Large numbers of cases not linkable to transmission chains - Large numbers of cases from sentinel lab surveillance - Multiple unrelated clusters in several areas of the country/territory/area
