[†]Recovered counts as indicated by reporting member States

^{††}Data reported by state/district/territory public health authorities. Confirmed case and death totals may include a small proportion of probable cases and deaths due to differences in reporting. Excludes counts for Guam, Commonwealth of the Northern Marianas, Puerto Rico, and the United States Virgin Islands

[‡]To date, the probable deaths are those reported and defined by New York City, available at <https://on.nyc.gov/2RloJdU>

^{||}Confirmed case counts for Chile have been revised since the previous report.

[§]Probable deaths as defined by the Ecuador Ministry of Public Health, available at: <https://bit.ly/2RZtqJR>

[¶]Total confirmed cases reported as per Peru Ministry of Health, of which 8,363 cases tested positive by RT-PCR and the remaining 7,265 cases tested positive by rapid diagnostic tests (RDTs); however, to date, these RDTs are not recommended for use by WHO

Note: WHO recommends using the following categories to describe **transmission patterns** at national and sub-national levels (wherever possible) to guide decisions for preparedness, readiness and response activities.

Category number	Category name	Definition
1	No cases	Countries/territories/areas with no cases
2	Sporadic cases	Countries/territories/areas with one or more cases, imported or locally detected
3	Clusters of cases	Countries/territories/areas experiencing cases, clustered in time, geographic location and/or by common exposures
4	Community transmission	Countries/area/territories experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: <ul style="list-style-type: none"> - Large numbers of cases not linkable to transmission chains - Large numbers of cases from sentinel lab surveillance - Multiple unrelated clusters in several areas of the country/territory/area
