

Global & Regional Update. 2 PM WDC.

1 April 2020

Global 855,382
 cases

 41,781
 deaths

 205
 countries/territories/areas
HIGHLIGHTS

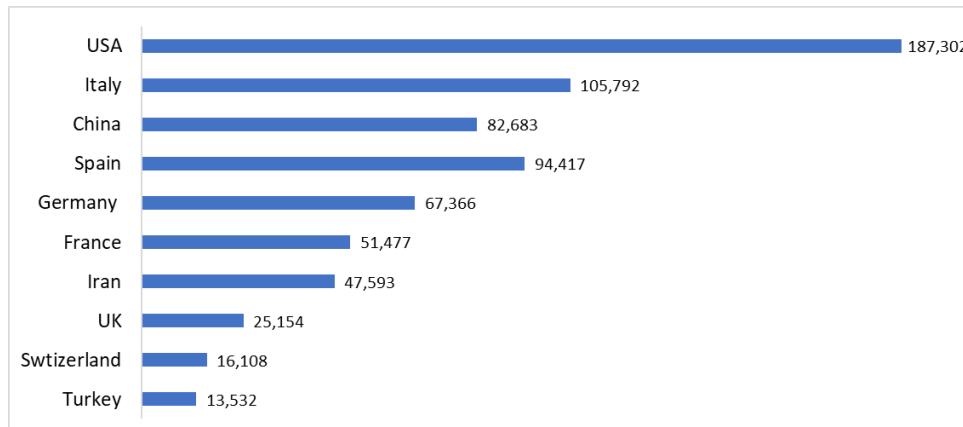

In the Region of the Americas, an additional 27,963 cases and 1,004 deaths were reported in the past 24 hours from 51 countries/areas/territories.

- **The United States of America (US)** continues to report majority of the cases (86%) and deaths (84%) (see Table 1). In addition to New York City (41,771 cases and 1,096 deaths), other US cities experiencing a high growth rate include Detroit, Miami, and New Orleans.
- On 31 March, the US White House released estimated figures of COVID-19 death based on a [model from the University of Washington](#) – an estimated 100,000 – 200,000 people are projected to die based on current projections, and under the assumption of social distancing measures until the end of April.
- [The Washington Post](#) obtained memos from the **U.S. CDC, which said that cloth masks could help prevent the spread** of the virus if people wore them in public – and the advice was being shared with the White House Task Force.
- **A US aircraft carrier** with at least 100 sailors who tested positive for COVID-19 among its 4,000 crew members is docked in Guam and requesting urgent help.
- **Brazil** reported 1,138 additional cases in the last 24 hours for a 25% relative increase in cases compared to the previous day. Similarly, a 26% relative increase in deaths was reported (41 new deaths).
- **Argentina surpassed 1,000 cases** in the past 24 hours (see table 1) and reported 10 cases classified as community transmission – accordingly, the country transmission status has been adjusted.

In China, 1 local case (Guangdong) and 35 new imported cases were reported to date.

Iran reported a cumulative total of 3,036 deaths to date, thereby joining China (3,312), France (3,523), Italy (12,430), USA (3,846), and Spain (8,289) as one of the six (6) countries to surpass the threshold of 3,000 deaths.

	Virgin Islands (US)	30	24		Clusters of cases
	Subtotal	2,543	2,223	95	
	Total	216,912	20,750	4,565	

New Country

Data Updated

*Ecuador confirmed case totals include 2,302 confirmed cases and 70 probable cases; death totals include 79 confirmed deaths and 67 probable deaths

Note: WHO recommends using the following categories to describe **transmission patterns** at national and sub-national levels (wherever possible) to guide decisions for

Category number	Category name	Definition
1	No cases	Countries/territories/areas with no cases
2	Sporadic cases	Countries/territories/areas with one or more cases, imported or locally detected
3	Clusters of cases	Countries/territories/areas experiencing cases, clustered in time, geographic location and/or by common exposures
4	Community transmission	Countries/area/territories experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: - Large numbers of cases not linkable to transmission chains - Large numbers of cases from sentinel lab surveillance - Multiple unrelated clusters in several areas of the country/territory/area
