

# VIGICARIB NEWS

18<sup>TH</sup> AUGUST, 2022

## OVERVIEW

This issue includes:

- [Case Safety Reports](#) to VigiCarib Network
- CARICOM [COVID-19 Vaccine Safety Reports](#) in VigiBase
- [Summary of Case Safety Reports](#) from CARICOM to WHO Programme for International Drug Monitoring (PIDM)
- [Global Alerts of Substandard / Falsified Medical Products](#)
- [COVID-19 Vaccines and Therapeutics](#): Regulatory Updates
- [COVID-19 Resources](#) for Regulation and Vigilance

Image by: Polina Tankilevitch, Source: pexels.com

### Note to Reader:

*The following summary presents data on case reports of adverse events following immunization (AEFIs) with COVID-19 vaccines, and suspected adverse drug reactions, based on Individual Case Safety Reports (ICRSs) in regional (CRS) and global (WHO) databases. The ICRSs in the global database have been submitted by national pharmacovigilance centres in CARPHA Member States with membership in the WHO Programme for International Drug Monitoring (PIDM). The information provided is **for descriptive purposes** only, e.g. reporting trends. Some of the ICRSs may not have been clinically reviewed or may be pending investigation.*

**Any assessment of an association between COVID-19 vaccines and an increased risk of a given outcome requires additional investigation to get full information.**

## CASE SAFETY REPORTS TO VIGICARIB NETWORK

Between 16<sup>th</sup> July and 15<sup>th</sup> August 2022, the Caribbean Regulatory System received no safety case report of Adverse Events Following Immunization (AEFI), Adverse drug reactions (ADR), or Substandard / Falsified / Unregistered Medical Products (SF).

In all, 510 case reports have been shared with the CRS and the VigiCarib network since its inception in November 2017: suspected ADRs (326 – 63.9%), SFs (102 – 20.0%), and AEFIs (82 – 16.1%) – Table A1 (See Appendix I).

## CARICOM COVID-19 VACCINE SAFETY REPORTS IN GLOBAL DATABASE

As of 15<sup>th</sup> August, 2022, there have been 1,496 case reports of AEFIs involving COVID-19 vaccines

submitted to the global database, VigiBase from Barbados, Haiti, Jamaica and St Vincent and the Grenadines, mostly non-serious events, involving persons under 65 years (85.0%), and females (74.5%). The month with the greatest reporting activity is April 2021: Figure 1. Two hundred and sixty-four reports (17.6%) were classified as Serious, including 59 where deaths were reported outcomes – Figure 2, Table 3.

Four (4) additional COVID-19 AEFI case reports were submitted between 16<sup>th</sup> July and 15<sup>th</sup> August, 2022, with the most commonly reported reactions overall as: headache, fever, dizziness, fatigue, chills and myalgia – Table 3. The downward trend of reporting of AEFIs may be due to multiple factors including reduction in vaccinations, lack of awareness of reporting systems, and reduced risk perception. However, further study at the national level would be needed to confirm causality and factors affecting reporting.

**Figure 1: Case reports of adverse events following immunization (AEFIs) with COVID-19 vaccines from 1<sup>st</sup> March 2021 to 15<sup>th</sup> August 2022\***

\* - Monthly mid-points are cut-off points for the AEFI count

The reported ICSRs involved the following vaccines:

- COVID-19 vaccine NRVV Ad (ChAdOx1-S recombinant) by AstraZeneca or Serum Institute of India (COVISHIELD)
- COVID-19 vaccine NRVV Ad26 (Gam-Covid-Vac – Sputnik V)
- Tozinameran (Pfizer-BioNTech COVID-19 vaccine)
- COVID-19 vaccine NRVV Ad26 (JNJ 78436735) Johnson & Johnson
- COVID-19 vaccine inactivated (Vero cell) HB02 – BIBP-Sinopharm
- COVID-19 vaccine inactivated (Vero cell) WIV04- Sinopharm-Wuhan
- Elasomeran, COVID-19 Vaccine Moderna
- Covid-19 Vaccine (unspecified).

**Note:** The case reports describe events that occurred after vaccination, which may include coincidental events that are not attributed to the vaccine(s).

**Reporting Rates by Doses Administered**

Data from the Pan American Health Organization’s (PAHO) [dashboard on COVID-19 vaccines](#) administered in various Caribbean countries was used in the estimation of the reporting rate of AEFIs per 100,000 doses for countries reporting to the global database. Among the countries with reports in the global database, there were approximately 65.6 AEFI reports per 100,000 doses of COVID-19 vaccines administered, with 11 serious adverse events reported per 100,000 doses. These estimates include coincidental and/or unconfirmed reports. The reporting rates provide an overview of reporting in the given country, which may be influenced by various factors external to the national system.

**Table 1: Consolidated number of reported AEFI and reporting rate, by country as of 12<sup>th</sup> August, 2022**

Country	Total Doses	Total AEFIs	AEFIs per 100,000 doses	Total Serious AEFIs	Serious AEFIs per 100,000 doses
Barbados	373,390	595	159.4	84	22.5
Haiti	360,163	1	0.3	0	0
Jamaica	1,474,979	878	59.5	174	11.8
St Vincent and the Grenadines	72,280	22	30.4	6	8.3
<b>Total</b>	<b>2,280,812</b>	<b>1,496</b>	<b>65.6</b>	<b>264</b>	<b>11.6</b>

Key: \* - Includes 5 reports where the vaccine was reported using multiple names: brand and the generic name or platform.  
 ‡ - Calculated using counts of reports and doses administered.

**Table 2: Patient Age Groups Reported for AEFIs in VigiBase to 15<sup>th</sup> August, 2022 (N=1,496)**

Patient age	Count	Percent
12 - 17 years	95	6.4%
18 - 44 years	688	46.0%
45 - 64 years	488	32.6%
65 - 74 years	104	7.0%
≥ 75 years	76	5.1%
Unknown	45	2.9%

**Table 3: Top Reported Reactions for AEFIs in VigiBase to 15<sup>th</sup> August, 2022 (N=1,496)**

Top Reported Reactions	Count	Percent
PT: Headache	446	29.8%
PT: Pyrexia	295	19.7%
PT: Dizziness	294	19.7%
PT: Fatigue	246	16.4%
PT: Chills	243	16.2%
PT: Myalgia	217	14.5%
PT: Arthralgia	207	13.8%
PT: Nausea	169	11.3%
PT: Vaccination site pain	159	10.6%
PT: Malaise	148	9.9%

**Figure 2: Total AEFI Case Reports by Seriousness (N = 1,496)**

Seriousness criteria	Count	Percent
Death	59	3.9%
Life threatening	19	1.3%
Caused/prolonged hospitalization	93	6.2%
Disabling/incapacitating	49	3.3%
Other medically important condition	94	6.3%

*Note: Total exceeds 264 due to selection of multiple seriousness criteria in individual case reports*

**Table 4: Seriousness of Cases (n = 264)**

**SUMMARY OF CASE SAFETY REPORTS FROM CARICOM TO WHO PIDM**

A review of the Uppsala Monitoring Centre’s VigiBase identified 4,120 case reports from CARICOM countries with membership in the WHO Programme for International Drug Monitoring (PIDM) – 1,496 COVID-19 AEFI case reports, 142 non-COVID AEFI case reports, and 2,421 reports of suspected adverse drug reactions (ADRs). Table 5 identifies the number of case reports of suspected ADRs and AEFIs submitted by Member States between April 2007 and 15<sup>th</sup> August, 2022, inclusive of reports submitted by the CRS on behalf of Member States. Most of the case reports involved adults – Table 6.

Between 16<sup>th</sup> July and 15<sup>th</sup> August, 2022, ten (10) additional case reports were submitted to VigiBase from CARICOM: 4 AEFI reports, 6 ADR reports.

**Table 5: All VigiBase Reports from CARICOM: suspected ADRs/AEFIs**

Countries	Count	Percent
Barbados	1,372	33.3%
Dominica	14	0.3%
Guyana	12	0.3%
Haiti	19	0.5%
Jamaica	1,973	47.9%
Saint Vincent and the Grenadines	502	12.2%
Suriname	221	5.4%
Virgin Islands (British)	7	0.2%

**Table 6: ICSR Patient Ages Reported**

Patient age	Count	Percent
0 - 27 days	10	0.2%
28 days - 23 months	111	2.7%
2 - 11 years	91	2.2%
12 - 17 years	139	3.4%
18 - 44 years	1,307	31.7%
45 - 64 years	1,176	28.5%
65 - 74 years	423	10.3%
≥ 75 years	298	7.2%
Unknown	565	13.7%

### GLOBAL ALERTS OF SUBSTANDARD / FALSIFIED VACCINES AND MEDICINES

There have been no medical product alerts issued by the WHO in the past month. Given that medical products for the diagnosis, treatment and prevention of COVID-19 are in demand globally, this along with supply chain vulnerabilities and limited capacities in some countries creates opportunities for illicit goods (e.g. falsified test kits, vaccines and medicines), and diversion of legitimate products. We remind regulators in our Member States to remain vigilant and to work closely with national security agencies to assist to prevent, detect and respond to threats of falsified COVID-19 medical products.

For ease of reference and to assist with the identification of substandard / falsified medical products, we include the following reminders:

- Ensure that the supplier or donor is duly authorized by the emergency authorization holder of the vaccine or medicine to distribute the product in your country.
- Request quality documentation, such as: authorization letters, product dossiers, and lot release certificates for the proposed batches. The CRS team will assist focal points of CARPHA Member States in verification, including review of eligible products and pre-submission meetings.

#### **Identifying a Substandard or Falsified Medical Product (WHO SF products)**

Some falsified medical products are almost visually identical to the genuine product and very difficult to detect. However, many can be identified by:

- Examining the packaging for condition, spelling mistakes or grammatical errors;
- Checking the manufacture and expiry dates and ensuring any details on the outer packaging match the dates shown on the inner packaging; and
- Ensuring the medicine looks correct, is not discoloured, degraded, or has an unusual smell.

Patients or consumers should be advised to:

- Discuss anomalies with a doctor or pharmacist as soon as possible if he or she suspects the product is not working properly or he or she has suffered an adverse reaction;
- Refrain from buying, receiving or using medicines or vaccines from unauthorized or unregulated sources; and
- Report suspicious medical products to the National Medicines Regulatory Authority.

### COVID-19 VACCINES AND THERAPEUTICS: REGULATORY UPDATES

#### **Overview of COVID-19 Vaccine Development and Approvals**

- 170 candidate vaccines are in clinical development: 44 in Phase 3 trials, and 11 in Phase 4 trials; Figure in [COVID-19 Vaccines and Therapeutics Regulatory Tracker](#) (Phases tab).
- 40 vaccines are approved in various countries, and 39 are at various stages of engagement with WHO for emergency use listing (EUL).
- CARPHA-CRS has recommended 11 COVID-19 vaccines approved for emergency use listing by the WHO to Member States to date (12 have been reviewed by the team due to different WHO

approval dates for two AstraZeneca vaccines) – Table 7 (See [List of CRS Recommended products](#)). The most recently recommended vaccine is by CanSino Biological Inc.: COVID-19 Vaccine, (Ad5.CoV2-S [Recombinant]) - CONVIDECIA.

- On 15<sup>th</sup> August, the Medicines and Healthcare products Regulatory Agency (MHRA) of the U.K. issued a Conditional Marketing Authorisation for [Spikevax bivalent Original/Omicron booster vaccine](#). This decision is based on data from a clinical trial which showed that a booster with the bivalent Moderna vaccine triggers a strong immune response against both Omicron (BA.1) and the original 2020 strain. Safety monitoring showed that the side effects observed were the same as those seen for the original Moderna booster dose and were typically mild and self-resolving, and no serious safety concerns were identified.
- COVID-19 primary series and first booster vaccines' performance against Omicron variant of concern (VOC) is provided from WHO's Weekly Epidemiology Update (20th July, 2022): Figure 5 and Table 3. *No table or updated information was published in the supplement dated 10th August.*

<b>WestVac Biopharma Recombinant COVID-19 vaccine</b>	Recombinant SARS-CoV-2 S-RBD protein	2 doses I.M.	National Medical Products Administration	Not applicable	EOI under review
<b>Nanogen Pharmaceutical Biotechnology (Nanocovax)</b>	Recombinant Spike protein	2 doses I.M.	Drug Administration of Vietnam	Not applicable	EOI under review
<b>Vaxine Pty Ltd./CinnaGen Co. (SpikoGen)</b>	Recombinant Protein	2 doses I.M.	Iran Food Drug Administration (IFDA)	Not applicable	EOI under review
<b>R-PHARM (Vaccine R-COVI)</b>	Recombinant ChAdOx1 adeno. vector	Not stated	Russian NRA	Not applicable	EOI under review

## CARIBBEAN REGULATORY SYSTEM

<b>SK Bioscience Co., Ltd.</b> (Nuvaxovid)	Recombinant nanoparticle spike protein	2 doses I.M.	Ministry of Food and Drug Safety (MFDS), Rep. of Korea	Not applicable	Rolling data starting in June
<b>Medicago Inc</b> (COVIFENZ)	Virus-like particles (VLP) of SARS-CoV-2 spike protein	2 doses I.M. 1 country	Health Canada	Not applicable	Application withdrawn by applicant
<b>Arcturus Therapeutics</b> (ARCT-154)	RNA Vaccine	2 doses I.M.	Drug Administration of Vietnam	Not applicable	EOI under review
<b>Bio-Manguinhos/ Fiocruz</b> (AZD1222)	Recombinant ChAdOx1 adeno. vector	Not stated	National Health Surveillance Agency (ANVISA)	Not applicable	EOI under review
<b>Vaxxinity</b> (UB-612)	Protein-peptide vaccine	2 doses I.M.	United States Food and Drug Administration	Not applicable	EOI under review
<b>Sinocelltech, Ltd</b> (SCTV01C)*	Recombinant Protein	1 dose I.M.	National Medical Products Administration	Not applicable	EOI received
<b>Razi Vaccine &amp; Serum Research Institute</b> (Raz Par Cov)*	Recombinant Protein	3 doses I.M. and I.N.	Iran Food Drug Administration (IFDA)	Not applicable	EOI received
<b>Valneva</b> (VLA2001)*	Inactivated Virus	2 doses I.M.	European Medicines Agency	Not applicable	EOI received
<b>Medigen</b> (MVC-COV1901)*	CHO cell derived spike protein	2 doses I.M.	Therapeutic Goods Administration, Australia	Not applicable	EOI received
<b>HIPRA</b> (BIMERVAX)*	Recombinant Protein	2 doses I.M.	European Medicines Agency	Not applicable	EOI received

¥ - Storage information is provided primarily for sealed vials. See product information for additional details on storage and handling.

\* - COVID-19 Vaccine recently included in WHO EUL/PQ evaluation process.

Figure 3: WHO Summary of Vaccine effectiveness (VE) of primary series and first booster vaccination against the Omicron variant of concern

Dots represent point estimates of VE from each study; dark black horizontal lines represent median VE across all studies in stratum. All data is from a systematic review of COVID-19 VE studies; methods and summary tables of VE studies can be found on view-hub.org. Vertical panels represent VE for full primary series (grey dots) and VE for homologous or heterologous booster vaccination (other colored dots) following completion of primary series vaccination with vaccine of primary series noted in panel header. All booster VE estimates are for the first booster dose. Severe disease includes hospitalization and pneumonia; symptomatic disease includes disease of any severity level; any infection can include symptomatic and asymptomatic infection. Additional details on the methods for inclusion of the estimates in the plots provided in text. Figure 5 summarizes the impact of the Omicron variant on vaccine effectiveness (VE) over time, grouped by the primary series vaccine; booster doses may have been a different vaccine (i.e., both homologous and heterologous booster vaccination VEs are shown). Additional information on vaccine performance against VOCs can also be found in Annex 3.

Additional information on Methods for Figure 5 and Interpretation of Results are provided at: <https://www.who.int/publications/m/item/weekly-epidemiological-update-on-covid-19---20-july-2022>

**Table 8: WHO Summary of vaccine performance against variants of concern (VOC) relative to ancestral stains**

		Omicron Sub-Lineage				
		BA.1	BA.2	BA.2.12.1	BA.3	BA.4/BA.5
<b>Primary Series Vaccination</b>						
WHO Emergency Use Listing (EUL) Qualified Vaccines	AstraZeneca-Vaxzevria/SII-Covishield	HNR <sub>10</sub>	HNR <sub>1</sub>

## CARIBBEAN REGULATORY SYSTEM

Data as of 11 July 2022

Abbreviations: HNR=high non-response. Arrows generalize the magnitude of reduction in neutralization against the Omicron sub-lineage relative to the ancestral strain: “↔” indicates 2 to <5-fold reduction; “↓↓” indicates 5 to <10-fold reduction; “↓↓↓” indicates ≥10-fold reduction. When more than one neutralization study is available, the interquartile range (25th and 75th percentiles) of fold reductions across all studies was used, restricting to studies reporting ≥75% of persons/sera with detectable neutralization titers. HNR indicates a median percent of persons/sera with detectable neutralization titers across all studies of <75%; in these instances, fold-reductions can be biased and, thus are not presented. The number of studies is shown as subscripts. For booster vaccination, only schedules with available results are shown.

### Additional notes

- Studies contributing to the table are identified from an ongoing review of the preprint and published literature on neutralization of SARS-CoV-2 variants by COVID-19 vaccines.
- Studies that use samples collected more than seven days and less than six months after complete vaccination and that use an ancestral strain as the reference are included in the table.
- Studies of immunocompromised persons are excluded.
- It is important to note that studies vary in population and other methodological considerations, which may in part explain some differences when comparing products between different studies. In addition, the reductions summarized in the table do not incorporate uncertainty intervals around the degree of reductions, which can vary substantially across studies when reported.

Extracted from WHO Weekly Epidemiological Update: Edition 101, published 20<sup>th</sup> July, 2022. *No table or updated information was published in the supplement dated 10<sup>th</sup> August.* Available at: <https://www.who.int/publications/m>. See updated issue for references and additional information.

## INFORMATION

This newsletter is produced by the technical team of the CARPHA Caribbean Regulatory System **for the focal points of CARPHA Member States, drug safety officers, immunization programme managers, public health administrators, public sector procurement agencies, and CARPHA staff** with an interest in the safety and quality of medicines and vaccines. A public version may be posted occasionally, however not all content shared with focal points will be publicized.
